

LAVALIER MICROPHONE

The state of the lavalier is controlled by the power/mute button on the transmitter that has an associated visual indicator.

POWER ON/OFF

Press and hold the power/mute button until the LED light illuminates green. This means the microphone will project within the classroom (as long as the touch panel is also turned on). To power off the microphone, press and hold the power/mute button till the LED light turns off.

MUTE

Press the power/mute button until the LED light turns orange. This means the microphone is still powered on, but will not project within the classroom.
